Board of Directors
Goleta County Water District
4699 Hollister Avenue
Santa Barbara, California 93105

Gentlemen:

Subject: Water service for Aero Spacelines at
Santa Barbara Municipal Airport

At the request of the City of Santa Barbara, your contractor recently completed installation of a 14" connection to your main on Hollister Avenue, about 1,000 feet west of Fairview Avenue and approximately 120 feet of 14" main southerly across Hollister Avenue. This work was done as an emergency in order to avoid delay of the Hollister Avenue pavement widening project at this location. Funds were allocated by the Santa Barbara City Council, payable to your district, for this work.

The basic need for the main at this time, including two fire hydrants and a service meter, is to supply water for domestic and fire flow use to the Aero Spacelines lease and for which an extension of an additional 662 feet is needed. This extension together with the 120 feet installed across Hollister Avenue is shown on City Plan No. C-1-3050 which is filed with your manager, Mr. Robert Watson. The City Council has also allocated an additional sum of \$15,500, payable to your district for the 662 foot extension of 14" and 12" main to serve the Aero Spacelines lease at the airport.

Although the 14" main will deliver a supply in excess of the volume needed to serve Aero Spacelines, it is probable that this firm will be the only customer to be connected to this main for some time. Since existing mains in this part of the airport cannot adequately serve the Aero Spacelines lease, it is felt that the capacity of this line should be in excess of Aero Spacelines needs in order that the main may replace existing mains as part of the ultimate airport water distribution system.

8/6/68 - Goleta Co. Water Dist.

In view of the fact that the Airport Commission has recently required a survey of the adequacy of existing water mains, it is possible that the City would apply for a master meter for the 14" main at such time as this line is incorporated into the airport distribution system. Until that time, it is our understanding that you would require full jurisdiction over the main, including an easement for that portion of the main within the airport and extending to the meter which would be placed for Aero Spacelines use.

It is the City's policy to own and control all water lines within the Airport boundary, and it is possible that the 14" main will at some time become a part of the airport main line system. Therefore, a request is made herewith for your approval of an arrangement wherein an interim easement would be granted to you by the City together with jurisdiction and control of the use of the 662 foot main extension, including appurtenant facilities. Also providing that the same would be relinquished by you including interim jurisdiction and control, following the installation of a master meter on this extension presumably at a point on the south line of Hollister Avenue.

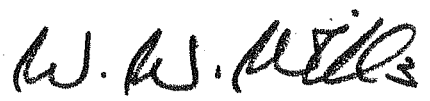

The foregoing request is made at this time in order to expedite the installation needed for the Aero Spacelines lease and also for the purpose of delaying for an interim period the installation of a second master meter in the airport distribution system. May we suggest that your favorable action be endorsed at the space provided on the attached copy of this letter and the same be returned to this office. It is our understanding that this letter will be before your Board at the regular meeting of August 8, 1968.

Very truly yours,

C. G. PETRIE
